

Altera Certified Design Center FPGA Design Services

Mantaro is an Altera Certified Design Center (CDC). As a premier partner, Mantaro engineers are highly trained and certified to design system-on-a-programmable-chip solutions. Recognized for extensive development capabilities and FPGA application experience, Mantaro offers the highest level of service and maintains an excellent relationship with Altera.

Telecommunications, industrial and commercial companies have worked with Mantaro to develop their products. Projects range from development of compact scientific instruments to 40 Gigabit networking equipment.

As an Altera CDC, Mantaro maintains a substantial knowledge and skills base and their position at the leading edge of FPGA development capabilities. Preferential access to development tools, IP cores, training materials, and technical support is granted to Mantaro by Altera to ensure success on your project.

Mantaro provides a full range of product development services designed to enable its customers to realize faster time to market and to remain focused on building core intellectual property (IP). Mantaro can meet your requirements for product development services, drawing on extensive experience in mixed signal design, board-level and FPGA implementations, system modeling, digital signal processing (DSP) analysis, and embedded software.

During the entire, development process Mantaro is focused on maintaining effective communication and adhering to project schedules. With regular review meetings and a dedicated team that will be available for future projects, customers have come to think of Mantaro as an extension of their own engineering organizations.
